T201DCH50-M T201DCH100-M T201DCH300-M

AC/DC TRUE RMS or DC BIPOLAR CURRENT TRANSFORMER WITH RS485 PORT AND MODBUS RTU PROTOCOL

SENECA® CE

SENECA S.r.l. Via Austria 26 – 35127 – Z.I. - PADOVA (PD) - ITALY Tel. +39.049.8705355 – 8705355 Fax +39 049.8706287 www.seneca.it

ORIGINAL INSTRUCTIONS

Introduction

Contents of the present documentation refer to products and technologies described in it.

All technical data contained in the document may be modified without prior notice.

Content of this documentation is subject to periodical revision.

To use the product safely and effectively, read carefully the following instructions before use.

The product must be used only for the use for which it was designed and built: any other use must be considered with full responsibility of the user.

The installation, programming and set-up is allowed only to authorized operators, physically and intellectually suitable.

Set up shall be performed only after a correct installation and the user shall perform every operation described in the installation manual carefully.

Seneca is not considered liable for failure, breakdown, accident caused because of ignorance or failure to apply the indicated requirements.

Seneca is not considered liable for any unauthorized changes.

Seneca reserves the right to modify the device, for any commercial or construction requirements, without the obligation to promptly update the reference manuals.

No liability for the contents of this documents can be accepted.

Use the concepts, examples and other content at your own risk.

There may be errors and inaccuracies in this document that may of course be damaging to your system.

Proceed with caution, and although this is highly unlikely, the author(s) do not take any responsibility for that. Technical features subject to change without notice.

1. DEVICE DESCRIPTION AND INTENDED USE

WARNING!

This User Manual extend the information from the Installation Manual about the device configuration. Use the Installation Manual for more info.

WARNING!

Under any circumstances, SENECA s.r.l. or its suppliers shall not be responsible for loss of recording data/incomes or for consequential or incidental damage due to neglect or reckless mishandling of the device, even though SENECA is well aware of these possible damages.

SENECA, its subsidiaries, affiliates, companies of the group, its suppliers and retailers shall not guarantee that the functions will satisfy completely customer's expectations or that device, the firmware and the software shall have no errors or work continuously.

1.1. **Description**

The T201DCH50/100/300-M are isolated, contact less loop powered AC/DC current transducers. The look and device's function are very similar to those of an active standard Current Transformer, but with the remarkable feature of measuring the DC and AC component. For its electrical endurance, ease of use and compact dimensions, the T201DCH50-M, T201DCH100-M and T201DCH300-M fit every kind of current measurement: up to 50 Adc/Aac, 100 Adc/Aac and 300 Adc/Aac (respectively).

A RS485 port with a standard Modus RTU protocol is also available.

The device can measure a current in 2 different modes (using dip switches or the Easy Setup Software):

- TRUE RMS AC/DC CURRENT MEASURE
- DC BIPOLAR CURRENT MEASURE (used also for obtain the sign +/- of a DC current)

1.2. Features

- Similar usage to a standard alternating current active C.T.
- No shunt, no wasted power from the measure circuit
- High accuracy rating (>2% FS): 0.3% for 50A and 100A models / 0.5% for 300A model.
- Suitable for use with all Seneca modules that allow to power the device with at least 12 Vdc and having a 0 – 10Vdc input
- Simple configurable with dip switches or with the free Easy Setup software
- Two ranges, dip-switch selectable
- Damping filter availability to improve stable reading
- Modbus RTU protocol by RS485 port
- Modbus Address/Baud Rate/Range/Mode configurable also from dip switch

- Suitable for batteries, battery chargers, solar panels, power units and generic dc and ac loads.
- Compact size: overall dimensions less than 96,5 x 68 x 26 mm
- Baud rate for Modbus RTU: from 1200 baud up to 115200 baud
- Start/Stop Input/Output Values configurable with Easy Setup software
- I Max/Min Resettable Modbus RTU registers available
- Quick installation on DIN 46277 rail

Refer to the installation manual for more information.

1.3. Technical specifications

GENERAL SPECIFICATIONS	
Power supply	11.5 – 28Vdc (between Vcc and GND)
Absorption max	21mA (with no load)

BOX	
Dimensions	96,5 x 68 x 26 mm
Hole Diameter	20.8 mm
Box, protection degree	Black, PA6, IP20

RS485 COMMUNICATION PORTS			
Number	1		
Port	Modbus RTU Slave		
Baudrate	1200115200 configurable		

ENVIRONMENTAL CONDITIONS			
Temperature	-20°C ÷ +70°C		
Humidity	10 ÷ 90% no condensing		
Storage temperature	-40°C ÷ +85°C		

REFERENCE STANDARDS	
EN 61000-6-4	Emission, industrial environmental
EN 61000-6-2	Immunity, industrial environmental
EN 61010-1	Safety

Refer to the installation manual for more information.

2. CONFIGURING THE DEVICE

The Device can be configured in two ways:

- A configuration from dip switches
- A full configuration from flash (using Easy Setup Software)

WARNING!

Dip switches configuration are active only after a reboot!

The Dip Switch setting will overwrite the Flash setting so, if you need to use the flash configuration you MUST set ALL dip switches to "OFF".

3. **DIP SWITCH CONFIGURATION**

3.1. Loading configuration from flash

If ALL Dip Switch 1...8 are OFF, the device use the Flash configuration (you must use the Easy Setup Software for configure)

Load	DIP1	DIP2	DIP3	DIP4	DIP5	DIP6	DIP7	DIP8
Configuration								
FROM FLASH	OFF							

3.2. Setting the Modbus RTU Station Address

Dip Switch 1..4 are using for configure the Modbus RTU Station Address:

Modbus RTU	DIP1	DIP2	DIP3	DIP4
Address				
1	ON	OFF	OFF	OFF
2	OFF	ON	OFF	OFF
3	ON	ON	OFF	OFF
4	OFF	OFF	ON	OFF
5	ON	OFF	ON	OFF
6	OFF	ON	ON	OFF
7	ON	ON	ON	OFF
8	OFF	OFF	OFF	ON
9	ON	OFF	OFF	ON
10	OFF	ON	OFF	ON
11	ON	ON	OFF	ON
12	OFF	OFF	ON	ON
13	ON	OFF	ON	ON
14	OFF	ON	ON	ON
15	ON	ON	ON	ON

Rev. 1.0.2

3.3. Setting the RS485 Baud rate

Dip Switch 5..6 are used for setting the Baud Rate

Baud Rate	DIP5	DIP6
9600	OFF	OFF
19200	ON	OFF
38400	OFF	ON
57600	ON	ON

WARNING!

The Parity bit can not be configured with the dip switches configuration but only from the Easy Setup software. By setting the dip switches the parity is always set to "None" (8,N,1).

3.4. Setting the RMS/Bipolar mode and 50% - 100% full scale

Dip Switch 7: Select from True RMS Measure / Bipolar DC Measure Dip Switch 8: Select 50% of full scale

The following figure is related to RMS measure ("Bipol" dip switch 7 = OFF):

Page 8

MODEL	BIPOL DIP7 SWITCH	50% FS DIP8 SWITCH	A	В
T201DCH50-M	OFF	OFF	25 A	50 A
T201DCH50-M	OFF	ON	12,5 A	25 A
T201DCH100-M	OFF	OFF	50 A	100 A
T201DCH100-M	OFF	ON	25 A	50 A
T201DCH300-M	OFF	OFF	150 A	300 A
T201DCH300-M	OFF	ON	75 A	150 A

The following figure is related to Bipolar measure ("Bipol" dip switch 7 = ON):

MODEL	BIPOL DIP7 SWITCH	50%FS DIP8 SWITCH	C	D
T201DCH50-M	ON	OFF	-50 A	+50 A
T201DCH50-M	ON	ON	-25 A	+25 A
T201DCH100-M	ON	OFF	-100 A	+100 A
T201DCH100-M	ON	ON	-50 A	+50 A
T201DCH300-M	ON	OFF	-300 A	+300 A
T201DCH300-M	ON	ON	-150 A	+150 A

ALL RIGHTS RESERVED. NO PART OF THIS PUBLICATION MAY BE REPRODUCED WITHOUT PRIOR PERMISSION.

www.seneca.it

Doc. MI004730-EN

WARNING!

Dip switches configuration is active only after a reboot!

So, for example using the RMS measure with 0 A input the Output voltage is 0V but using the Bipolar measure with 0 A input the Output voltage is 5V.

4. MODBUS RTU PROTOCOL

The Modbus protocol supported by the T201DCH50-100-300 is:

Modbus RTU Slave

For more information about these protocols, please refer to the Modbus specification website:

http://www.modbus.org/specs.php.

4.1. Modbus RTU function code supported

The following Modbus RTU functions are supported:

Read Holding Register

- (function 3) Max 5 Registers (function 6)
- Write Single Register
 - Write Multiple registers (function 16) Max 2 Registers

WARNING!

All 32 bits values are stored into 2 consecutive registers

You can Read a Maximum of 5 Modbus Registers with the Read Holding Register function (function 3)

You can Write a Maximum of 2 Modbus Registers with the Write Multiple Register function (function

16)

5. MODBUS REGISTERS TABLE

In the following table this abbreviations are used:

MS = Most significant
LS = Less significant
MSW = Most significant Word (16 bits)
LSW = Less significant Word (16 bits)
R = Read only register
RW = Read and writeable register
RW* = Read and writeable register, the value can be stored in flash by using the store flash command
Unsigned 16 bits = Unsigned 16 bits register (from 0 to 65535)
Signed 16 bits = 16 bits register with sign (from -32768 to +32767)
Float 32 bits = Floating point single precision 32 bits (IEEE 754) register
0x = Hexadecimal Value

Register Name	Comment	Register Type	R/W	Default value or Start Value	Modbus Address	Register Offset
Machine ID	Module ID code	Unsigned 16 bits	R	-	40001	0
Firmware Revision	Firmware Revision Code	Unsigned 16 bits	R	-	40002	1
Command	This register is used for sending commands to the device. The following commands are supported: 49600 Store configuration in Flash 49568 Reset the Module	Unsigned 16 bits	R/W	0	40006	5

	49920					
	Reset I max Value					
	49921					
	Reset I min Value					
	After the command is					
	executed the register will					
	return to 0 value					
Modbus	Modbus RTU station	Unsigned	RW*	1	40033	32

6. FULL CONFIGURATION WITH EASY SETUP

For configure all the device parameters you must use the RS485 Port and the Easy T201DCH-M software included in the Easy Setup Suite.

You can download the Easy Setup software for free from:

www.seneca.it

6.1. Easy Setup Menu

Connect: Use the connect icon for connect the PC to the Device. Note that you need a RS485 to USB converter like Seneca S117P1 or S107USB for connect the device to a PC.

New: Load the default parameters in the actual project

Open: Open a stored project

Save: Save the actual project

Read: Read the actual configuration from the device (if the dip switches are not ALL OFF the configuration is read from dip switches)

If you read a configuration from the device with at least one dip switch to "ON" the software will read the dip switch configuration because overwrite the flash configuration.

Send: Send the project configuration (if the dip switches are not ALL OFF the device use the dip switch configuration and NOT the sent configuration)

Test: Start a Registers read, you can also reset the MIN/MAX values and start/stop a Datalogger

6.2. Creating a Project Configuration

A			
S EASY T201DCH (ver. 1.0.0.0)	_		×
Eile Language ?		NEO	
T201DCH			
Model T201DCH100-M V RS485 Modbus Slave Port			
Station Address 1 - Mode TRUE RMS	~		
Baud Rate 38400 V Filter LOW V	~		
Parity OFF ~			
Input Start Scale 0.00 + A Output Start Scale 0.00 V			
Input Stop Scale 100.00 + A Output Stop Scale 10.00 V			
N.B. Before sending the configuration, set the dip switches as shown 1 2 3 4 5 6 7 8			
Disconnected			

The parameters that can be configured are:

Model: Select between T201DCH50-M, T201DCH100-M or T201DCH300-M model.
Station Address: Select The Modbus RTU station address
Baud Rate: Select the Baud rate from 1200 to 115200 baud
Parity: Select NONE, ODD or EVEN
Mode: Select the current measure mode: True RMS or DC Bipolar
Filter: Select between LOW or HIGH:

FILTER	RMS RESPONSE	BIPOLAR DC
	(10%-90% F.S.)	(10%-90% F.S.)
LOW	1400 ms	78 ms
HIGH	2900 ms	650 ms

Input Start/Stop Scale and Output Start/Stop Scale: Select the Start/Stop input and Output Start/Stop scale see figure:

Note that with an input of 0 A the output is 0 V and over 80 A the output is over 6V (6V and 2V are not a limit).

The Output Voltage is limited to about 10.8V

6.3. Testing the Device

When the configuration is sent to the device you can test the actual configuration by using the 🔛 icon:

T201DCH Test				
	Current	9.945	Α	
	Maximum Current	9.977	Α	Reset I max
	Minimum Current	0	Α	Reset I min
	Output Voltage	5.497	۷	
D				Running
Datalogger				Stop
Enable datale	ogger (seconds) 1 second		\sim	
Open las	st log Open I	og folder		Exit

The test configuration will acquire the measure from the Modbus registers, you can also reset the MIN/MAX values.

6.3.1. The datalogger

The datalogger can be used for acquire data that can be used with an external software (for example Microsoft Excel ™). It is possible to set how much time to acquire the samples (minimum 1 second):

T201DCH Test				
	Current	9.942	Α	
	Maximum Current	10.017	Α	Reset I max
	Minimum Current	0	Α	Reset I min
	Output Voltage	5.502	۷	
				Ready
Datalogger				
				Play
	ogger (seconds) T second		~	
Open las	st log Open	log folder		Exit

The datalogger will create a file in a standard .csv format that can be open with external tools:

	А	В	С	D	Е	F	G

7. ACCESSORIES

For connect T201DCH50-100-300-M to a PC you need a RS485 to USB converter. The RS485 to USB converters are:

7.1. Seneca S107USB

S107USB is an interface able to implement a RS485 serial port by using a PC USB port. The available drivers will recognize the serial interface as a standard serial port; so the use of the product is directly allowed through any software able to communicate with the standard serial ports of the operating system (COM1, COM2, etc). RS485 and USB ports are isolated from each other at 1500 V.

You can buy the Seneca S107USB also from our online store:

https://www.seneca.it/en/linee-di-prodotto/acquisizione-dati-e-automazione/moduli-dicomunicazione/convertitori-seriali-usb/s107usb

ALL RIGHTS RESERVED. NO PART OF THIS PUBLICATION MAY BE REPRODUCED WITHOUT PRIOR PERMISSION.

7.2. Seneca S117P1

S117P1 is a converter that realizes a serial connection via RS232, RS485 or TTL, using a USB port on the PC.

Through the drivers the operating system treats the serial interface like a standard serial port, allowing the use of the converter through any software that can communicate with the standard serial ports present in the operating system (COM1, COM2, ecc.). RS232, RS485 and TTL ports are electrically isolated from the USB avoiding most of the problems of electrical noises. The package of the product includes USB-miniUSB cable, serial cable Jack-DB9F and programming cable RJ10-AMP

You can buy the Seneca S117P1 also from our online store:
